

BUSINESS INTELLIGENCE INSTITUTE

Business Intelligence Technologies Pty Ltd has initiated a unique industry-education program called the Business Intelligence Institute (BII) across Asia Pacific.

The Business Intelligence Institute is dedicated to educating business and information technology professionals about the strategies, techniques and tools required to successfully design, build and maintain Business Intelligence and Data Warehouse solutions.

The BII offers specialized programs based on global industry standards. It supports our consultants and customers with extensive training by delivering classrooms sessions and onsite training. The Institute facilitates collaborative research project initiatives between industry, government and academia by conducting world class seminars led by subject experts and domain consultants from the Australia and abroad.

The Business Intelligence Institute is in alliance with world renowned Universities and Institutes in Asia Pacific to promote academic development in Business Intelligence and related areas. BII also works with leading companies such as SAP, IBM, Microsoft and Teradata and industry associations such as the Australian Computer Society (ACS).

Power Suite of Applications

Business Intelligence Technologies has developed "Power Suite", a software framework that facilitates rapid application development, implementation and maintenance of Business Intelligence and Analytic Solutions. It is designed for Scalability and Extensibility to facilitate adoption, provide a low TCO and deliver a fast ROI. The concept of "Business Intelligence in a Box" delivers an integrated business and analytical system which works with existing applications and supports continuous planning, monitoring and reporting cycles. Power Suite generates reports that are easy to analyze, customize and also provides indications and alerts along with root cause analysis.

Power Manager

The BIT's **Power Manager** is a powerful business Intelligence tool which delivers all the BI capabilities: Scoreboarding, dashboards, performance management, reporting, analysis as well as decision making on a single proven architecture. This enables the 'power users' access to a suit of integrated and simple analytical application for enhanced decision making.

► Telecom:

Power Manager Telecom is designed for managers in e-Telco industry, assisting them to make quick decision. The tool allows the manager to do customer segmentation and monitor their behavior. The manager can device loyalty program, analyzes churn profitability and network dropped call analysis.

Power Manager Telecom Customizes reporting, tracks data and analyze outputs, enabling growth and giving trend indications for market performance. It enables the user to translate strategies into plans, monitor execution and provide insight to manage and improve financial and operational performance.

► Finance:

Power Manager Finance is a set of tools designed for banking and financial service firms to enable them to make decision on their data warehousing. Typical applications where the tool is useful are Basel II, SOX, and Anti Money Laundering.

Power Manager Finance is able to generate reports to meet the requirements of the managers and assist in critical decision making and monitor overall performance. It enables the manager to translate strategies into plans, monitor execution and provide insight into managing and improving financial and operational performance.

► Health care Dashboard:

Power Manager Health Care Dashboard is designed for administrative decision support for health care systems in the private and public sector.

Power Manager Health Care Dashboard is capable of tracking the key performance indicators (KPI) and sub KPI's, e.g. for the average length of stay, occupied bed days, staff/patient ratio, off stretcher time from ambulance to treatment and provides trend analysis. This enables the manager to generate reports to meet the requirements of health care professionals to assist in critical decision making and to monitor overall performance.

Power iForms

Power iForms Power iForms are designed for any industry that processes large volume Form Based applications. For example: Credit cards, mortgages, personal loans, consignment notes, mobile phone forms, Insurance forms etc. It assists in processing large volume of application forms by avoiding manual data entry of hand written information, by using ICR (Intelligent Character Recognition) technology, thus making the work fast and simpler.

Power iForms recognizes variations in handwriting, by using two Neural Network classifiers, one for number and one for alphabets, and is able to fill the same data in multiple locations. It improves overall efficiency by reducing repeated entry of the same data as well as preventing tedious data entry task.

Power Auditor

Power Auditor is designed for Auditors or Audit departments to improve the productivity and efficiency of an audit process. It is an integrated workflow software tool which provides document management, workflow planning, scheduling, risk assessment, risk control matrix, report generation, administration issue tracking and work papers utilities. By implementing the Power Auditor, an organization can save money and resources by minimizing audit data entry and achieve a greater accuracy and competency.

Power Auditor supports sharing audit results and related data between remote location and corporate offices. The centralized data library and multi level risk assessment allows for quick and easy tracking and reporting. It enables the auditor to spend less time on internal controls and places a greater emphasis upon measuring risk thus controlling the issues and weakness associated with the audit process.

Power Engine

Power Engine is a Hosted or On demand application which is specifically designed to deliver functions to the users with a minimum of complexity. It reduces cost and saves time leading to minimal risks of implementing software or hardware, no capital investment, rapid adoption, instant deployment, easier to maintain and reduced administration. The On demand power engine brings forth a Pay as you go subscription service substituting the traditional license fee.

Power Engine Features:

- Centralized data library and multi level risk assessment allowing for quick and easy tracking and reporting
- It synchronizes the data with multiple devices
